

To whom it may concern,

I embarked on building our family a new home in 2006.

Very soon thereafter, I employed the services of Byron Energy Efficient Design and Drafting through which I met Dave and Ruth Lawrence.

As I was a first timer, there were certain issues and learnings that had to be considered and resolved,

all of which were done by Dave in a patient, seamless and professional manner. Converting peoples

dreams and ideas into workable sustainable and efficient designs is not an easy task.

Dave's attention, and knowledge base of both building/construction and materials, were also very reassuring.

I found Dave an absolute pleasure to deal with. It was obvious that his aim was to ensure that you had the best product, and relevant information to work with, to ensure you got the best possible end product

We have been living in our home now for two years now, and have converted our ideas and dreams into the reality and function that is our home...we could not be happier, it is a joy to live in, daily.

My husband and I find our home, in design (and materials), functional, efficient, practical and remarkably beautiful.

I would recommend the services of Byron Energy Efficiency and Design to anyone.

Thank You Dave.

Michelle Gillespie
