To whom it may concern

Re: Dave Lawrence, Byron Energy Efficient Design and Drafting

We were fortunate enough to meet Ruth and Dave through our common interest of energy efficient design.

Having just moved to Dalwood and needing to renovate the old farmhouse into a slightly larger and more energy efficient home, we needed good advice that could be relied upon.

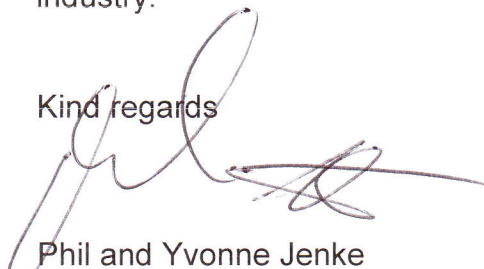

All the many rules of BASIX, specific ratings for rural areas and the usage of sustainable environmental materials set up many questions. Dave's course which he ran through the Byron Ace learning programs enabled us to understand these many elements required for energy efficient design.

We worked together through all the many eco design features which were attainable to us whilst still keeping as much of the original home as possible.

Ending up with a modern, fully practical and functional energy efficient home is a testament to Dave and Ruth's skills and passion in energy efficient design and drafting.

We would have no hesitation in recommending Byron Bay Energy Design and Drafting's extensive knowledge, passion and talent in the eco design and drafting industry.

Kind regards

Phil and Yvonne Jenke
